

MEASURING AND INCLINOMETERS

How do carpenters make sure what they are building isn't crooked? How do sailors know where they are in the middle of the ocean? How can a park ranger figure out how tall a tree is? They use an inclinometer. It is known by many names. It comes in many shapes and sizes. It has been around for over one thousand years! Many different kinds of jobs use an inclinometer. Isn't it odd that very few of us have heard of it?
